To match a character in the string expression against a specific character. Put the specific character directly in the pattern string. Certain special characters must be enclosed in brackets ([ ]). For more information, see Like Operator. The following example tests whether myString consists exactly of the single character H. Dim sMatch As Boolean = myString Like "H" To match a character in the string expression against a wildcard character. Put a question mark (?) in the pattern string.

In computer science, string-searching algorithms, sometimes called string-matching algorithms, are an important class of string algorithms that try to find a place where one or several strings are found within a larger string or text. A basic example of string searching is when the pattern and the searched text are arrays of elements of an alphabet  $\Sigma$ .  $\Sigma$  may be a human language alphabet, for example, the letters A through Z and other applications may use a binary alphabet or a DNA alphabet ...

In computer science, fuzzy string matching is the technique of finding strings that match a pattern approximately (rather than exactly). In another word, fuzzy string matching is a type of search that will find matches even when users misspell words or enter only partial words for the search.

Up to date, several approaches derived from classical string matching have been proposed to cope with the new search problems, yet each problem had its own algorithms. In this paper we show that a technique recently developed for multipattern approximate string matching is flexible enough to be successfully extended to solve many different music retrieval problems, as well as combinations thereof not addressed before.

The new pattern matching constructs enable cleaner syntax to examine data and manipulate control flow based on any condition of that data. You already write if statements and switch that test a variable's value. You write is statements that test a variable's type. Pattern matching adds new capabilities to those statements.
