Cold drawn guide rails. MONTEFERRO introduced cold drawn processing into the guide rail market at the end of the 40's. Through continuous improvements and optimization in co-operation with the rolling mill, today on the market is available a complete range of cold drawn guide rails from 3 Kg/mt to 14 Kg/mt for application below two meters per second (400 feet per minute) and for average load ...

Guide Rails | Monteferro

I am tasked with designing some HSS members to support the elevator guide rails on a building with high floor-to-floor (24 ft). The elevator rails cannot span this distance on their own and so we would like to use HSS6x6 columns to support the rails. The issue is deflection. The elevator manufacturer states we need to limit deflection to 1/8".

Elevator Guide Rail Supports Deflection Requirement ...

Onelevator guide rails carry out functions of both guiding and safety, since they are the structural member on which the safety gear works. Steel is currently the cheapest material that perfectly meets these two requirements. Elevator guide rails -Frequently Asked Questions Why are there machines that are mounted on the onelevator guide rails?

Elevator guide rails Frequently Asked Questions

The guide rails are just that - rails to guide the elevator. They shouldn't be taking any gravity loads. The piston for the elevator (assuming only a few story high elevator) usually is supported by 2 C's which rest on your pit slab. Therefore your pit slab should be designed for the elevator loads.

Elevator support design forces - Structural engineering ...

Viscosity: 300 SUS @ 100° F. Can be substituted for Westinghouse #16 and Otis #40 oil. Model Q-28 Dash Pot Oil Not a carcinogen, gold liquid, mild petroleum odor, boiling point 500°F. Model Q-30 Guide Rail Lube High viscosity, low pour lubricating oil with metal adhesive qualities to keep guide rails isolated from metal wear.

Guide Rails - AFD Industries Inc.

The rails to guide the elevator car are called main rails. The rails to guide the counterweight are called counterweight rails. For a typical traction passenger elevator the main rails are sized as 15 pound rails and the counterweights are sized as 8 pound rails. Rail sizes will increase as elevator capacity increases.
